Forecast for Monday 18 Oct 2021

Weather: Poor visibility will be a large feature of the day with any breaks likely confined to the West Coast (excluding Skye) through morning. Rain will spread northeastwards from late morning to give all ranges a few hours of wet weather, but as this clears away north through evening it will leave extensively foggy and drizzly conditions. Some cloud breaks developing towards midnight, however.

Chance of cloud free mountain/hill tops above 800m: 40% across the West Coast, roughly Torridon northwards through morning. Otherwise virtually no chance.

Visibility: Widely limited to a few hundred meters above the cloud base which will sit at around 500-700m, through much of the day. Best conditions along the West Coast. Rain and drizzle will turn lower slopes and glens rather hazy.

**Level above which ground is expected to be frozen/snow is expected to settle.*

Met Office Aberdeen Meteorologist's View
Strong winds may approach gale force above munro level from late afternoon. This, along with rain and drizzle will give a significant cooling effect.

Forecast for Tuesday 19 Oct 2021
Weather: An altogether brighter start compared to Monday with dry conditions and cloud generally higher and more broken. Unfortunately this will not last as outbreaks of heavy rain spread northeast through morning with a good chance of heavy and perhaps thundery showers into the afternoon and evening. Mild.

Maximum wind: South 20-30mph.

Chance of cloud free mountain/hill tops above 800m: 60% falling 10%.

Visibility: Areas of cloud above munro level initially but cloud will thicken and lower from the south through morning to around 500-600m, perhaps lower in places. Heavy rain will affect visibility in the glens, obscuring neighbouring slopes.

Temperature: **Glens:** 15 Celsius.
At 800m: Around plus 8 Celsius.
Freezing level: Well above summits.
